

# DO-331 Tools Architecture

## Component Overview

## Data Flow

## Key Design Decisions

### 1. Ada SPARK Implementation

All components are implemented in Ada SPARK with:

- `SPARK_Mode => On` for formal verification
- Bounded types (no dynamic allocation)

- Pre/Post contracts where appropriate
- No runtime exceptions

## 2. Bounded Data Structures

```
Max_Elements      : constant := 10_000;
Max_Name_Length   : constant := 256;
Max_Trace_Entries : constant := 50_000;
Max_Coverage_Points : constant := 100_000;
```

## 3. Type Safety

- `Element_ID` for unique identification
- `Element_Kind` enumeration for type discrimination
- `DAL_Level` for compliance level
- `Coverage_Type` for coverage point classification

## 4. Transformation Rules

IR Element	Model Element	DO-331 Objective
module	package	MB.2
function	action def	MB.3
type	attribute def	MB.2
if/else	decision	MB.3
state	state	MB.3
transition	transition	MB.3

## File Organization

```
